

RØDECASTER SYNC

RØDEcaster Sync is a powerful feature that seamlessly links the RØDEcaster Video Core console with the RØDEcaster Pro II or RØDEcaster Duo, creating a single unified production ecosystem. Connected via a single USB-C cable, it expands available inputs and outputs, enables shared audio mixing and recording, unlocks advanced video switching capabilities and delivers hands-on control of both audio and video from one surface. RØDEcaster Sync simplifies complex productions and enables scalable professional workflows that grow with your needs without adding complexity.

FEATURES AND BENEFITS:

Total Control

Use the physical faders and controls of the RØDEcaster Pro II or RØDEcaster Duo to manage both audio and video from one interface, reducing complexity and keeping your production fast and focused.

SMART Pad Power

Assign RØDEcaster Pro II or RØDEcaster Duo SMART pads to video switching, auto transitions, cut, media playback and graphic overlays, giving you instant tactile control over your video production with visual feedback that mirrors your RØDEcaster Video console.

Expansive Modular Mixer

Build a powerful 9-channel audio mixer using all available inputs across connected RØDEcaster devices, supporting up to 6 XLR microphone inputs, 2 integrated RØDE wireless receivers, plus USB and media sources, all combined into a single shared mix for complete production flexibility.

Custom Mixes for Every Output

Create and send up to 23 fully independent custom mixes to all available audio outputs, making it easy to tailor monitoring, streaming, recording and broadcast feeds without compromise.

Flawless Synchronisation

Keep audio and video perfectly synchronised across recording, streaming and all output destinations, ensuring professional results without manual alignment or post-production fixes.
